

## Charge Amps Dawn, RCD type B

Charge Amps Dawn, which will be put on the market from April 2023, have an inbuilt RCD (Residual Current Device) type B.

Charge Amps Dawn has a socket outlet for AC use in accordance with relevant standards, which stipulates that the charger needs to have an RCD type B (or RCD type A + DC protection).

The RCD Type B is tested against the standard IEC 60947-2, Annex M with a residual operation current limit of 30 mA AC and 6 mA DC.

We have, together with an external certification party, verified that our way of fulfilling the requirements of the RCD follows the above-mentioned standards.

The standard also states that the charger must have a test button. Charge Amps Dawn has a test button on the charging unit's left bottom.
